In the Android vs iOS debate, Android often gets major points for its openness and flexibility—there's plenty the Android platform lets users do that iOS doesn't, and even the most basic, out-of-the-box Android devices can be tweaked and customized to your liking. Enthusiasts want more than just tweaking system settings, however, and that's where tools like Xposed Framework and Magisk come into play.With these tools, you can install mods that transform your device in crazy ways, allowing you to drop in features like Dolby Atmos, more emoji, or advanced control for your device's wifi capabilities. You can use mods to trick out your smartphone out customized interfaces and, if you're daring, boost your device's performance beyond its defaults. One of the Pixel 2's key features is its always-on display. Thanks to the phone's OLED panel, it...Read moreFirst, you have to rootBefore we continue, one quick disclaimer: You need to root your device to install Xposed. Rooting your phone isn't difficult, but it's still a risk since it technically voids your warranty. Though it's easier to do now than it used to be, a mess-up could cause unpleasant malfunctions or even brick your device (though unlikely).Other, less-scary side effects include tripping Google's SafetyNet API, which is a security measure in the Android OS that will stop some apps/features from working, like the Google Play Store, Google Pay, Netflix, and—of course—Pokemon. We'll be using Magisk to hide the root from your system, which should keep these features intact, but it's possible some may not work properly even if you follow the correct steps. The good news? It's easy to uninstall Magisk and unroot your device if something stops working.Android: Over the weekend, Pokémon Go rolled out an update that will allow you to set one Pokémon...Read moreInstalling Magisk and Xposed Framework At first glance, the long list of steps it might seem overwhelming, but the whole process is easy once you have everything properly set up. Step 1: Prep your devicesGather the proper materials. You will need-The Android device you want to modA PCA USB cable to connect one to the otherWith your tools in hand, it's time to prep your Android device:First, enable developer mode by going to Settings > About (or however you get there on your specific device). For now, we'll move onto the PC portion of the guide.Step 2: Install Magisk using TWRP and safely root your phoneConnect your phone to your PC via USB.On your PC, download ADB, Fastboot, and the necessary drivers. The easiest way to do so is using this all-in-one installation package from the XDA Developers forum. Follow instructions on the download page, then return here when you're done (it only take a few seconds, tops).Next, go to this page and download the correct version of TWRP for your Android device. Then, unzip and open the TWRP folder.Shift + Right click anywhere inside the white area of the TWRP folder to open a command prompt.In the command prompt window, type: adb reboot bootloader.If your device is requesting to Allow USB debugging, tap "Yes." Your device should reboot in bootloader mode.Type fastboot flash recovery twrp-2.8.x.x-xxx.img, making sure to change the .IMG filename to match the .IMG file in the TWRP folder.Once the command completes, wrap up the PC steps by running the command fastboot reboot in command prompt.You can now disconnect your Android device, and we'll move onto the last steps for installing Magisk.When your Android device reboots, open the Magisk manager appNext to "Magisk not installed," tap "Install."Tap "download Zip only." You should see green check next to both Magisk and Magisk manager.Verify that your phone has been successfully rooted and passes SafetyNet's check by tapping the hamburger icon in the upper-left corner of Magisk Manager. Scroll down and tap "Start SafetyNet check." If you get green checkmarks, you're all set.Step 3: Install Xposed FrameworkWe're in the home stretch. If you made it this far, you've successfully rooted your phone, installed Magisk and Xposed, and you're now ready to begin modding Android. Like we said at the outset, this is where it gets exciting. (It's also easy.)Open either the Magisk Manager or Xposed apps on your phone, and navigate to their menus for downloading modules. The installation process can be slightly different in each app, but both will require you to reboot after each module is installed.
